

High voltage high sensitivity unipolar hall chip

1. Introduction

SL3144 is a high-voltage, high-sensitivity unipolar Hall switch chip, designed using bipolar semiconductor technology. The chip incorporates a voltage regulator unit, Hall voltage generator, differential amplification circuit, temperature compensation circuit, and open-collector output circuit. It operates by converting magnetic induction strength into a digital voltage signal. It is available in TO92S through-hole and SOT23-3L surface-mount packages, both compliant with RoHS standards.

2. Features

- Microstructure
- Open collector output
- ESD performance up to: $\pm 4\text{kv}$
- High sensitivity: 120/80 gs (typical)
- Wide voltage range: 3.5v~40v
- Operating temperature range: -40°C~125°C

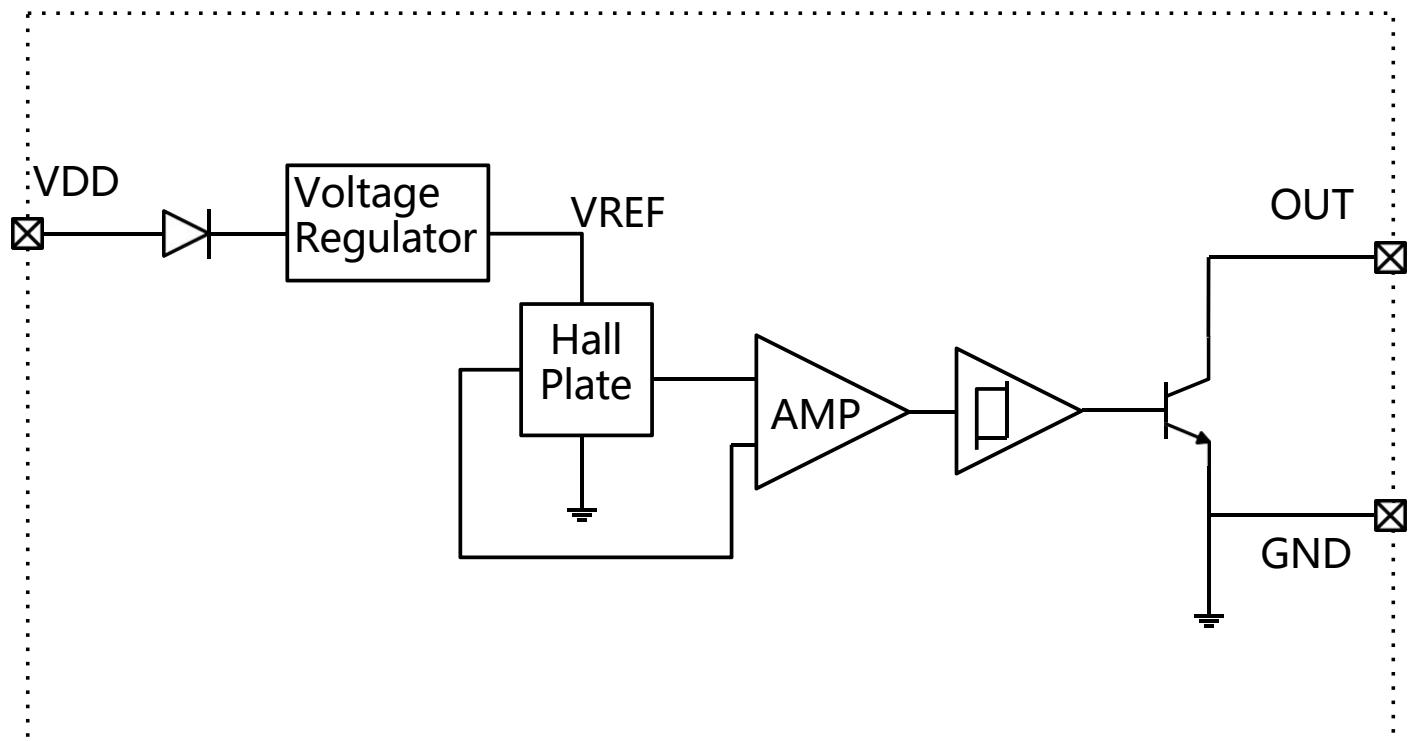

3. Fields of application

- Brushless motor commutation
- Flow sensors
- Position sensor
- Speed sensor
- Distance sensor

4. Product packaging

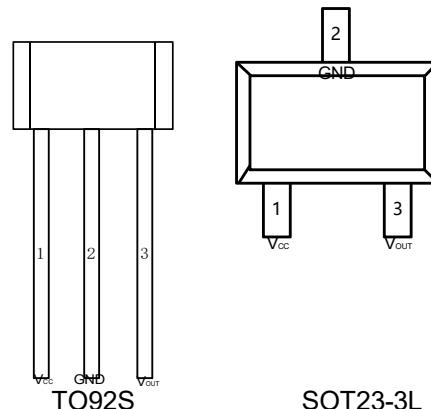

Partnumber	Package	Ambient, TA	Packing
SL3144-9	TO92S	-40°C~125°C	1000 pieces/bag
SL3144-3	SOT23-3L	-40°C~125°C	3000 pieces/reel

5. Function block diagram

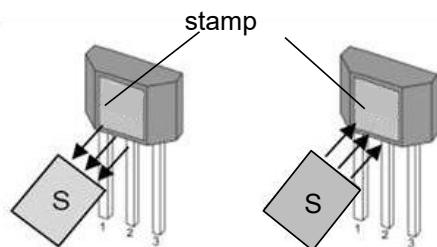

6. Pin description

Number	Name	Description
1	V _{cc}	power supply
2	GND	ground
3	V _{OUT}	export

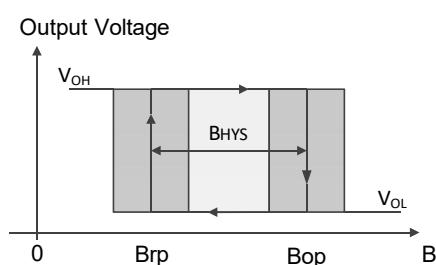

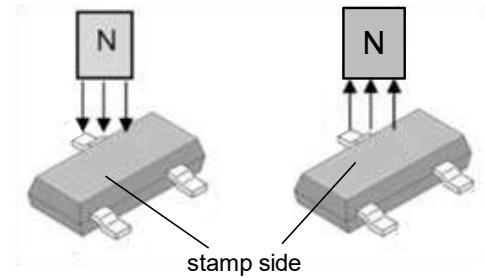

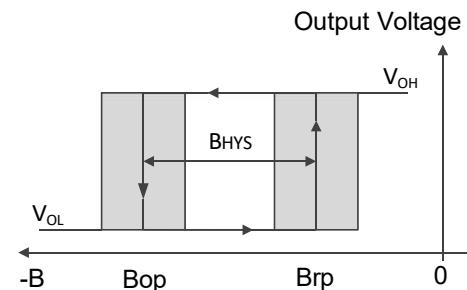

7. Magnetoelectric conversion characteristics

V_{OUT}=High Level

V_{OUT}=Low Level

 V_{OUT} =High Level V_{OUT} =Low Level

SOT23-3L Output State

8. Limit parameter

Parameters	Symbol	Min	Max	Units
power supply voltage	V_{CC}	-0.3	60	V
output voltage	V_{OUT}	-0.5	60	V
output current sink	I_{OUT}	0	40	mA
operating ambient temperature	T_J	-40	125	°C
storage temperature	T_{STG}	-50	165	°C

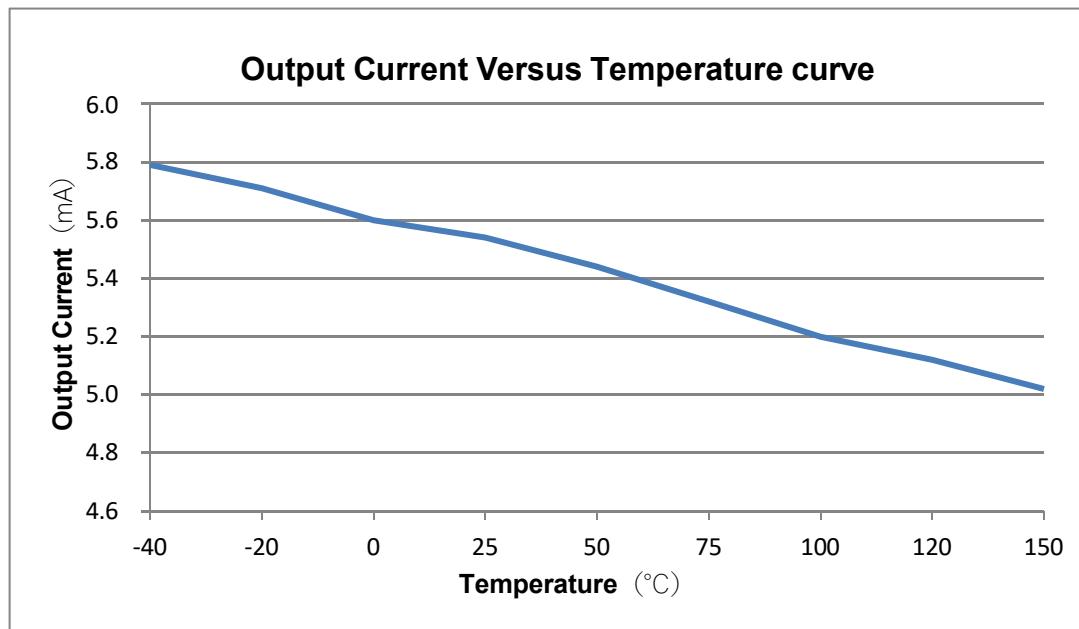

The absolute maximum rating is the limit that the chip can withstand, exceeding which may result in permanent damage to the chip.

9. Electrical and magnetic characteristics (TA=25°C, VCC=5V)

Parameters	Symbol	Test conditions	Min.	Typ.	Max.	Units
Electrical characteristic						
supply voltage	V_{CC}		3.5		40	V
operating current	I_{CC}	$V_{CC}=5V$		6	9	mA
output leakage current	I_{LE}				10	uA
output voltages	V_{SAT}	$I_{OUT}=20mA$, conduction state			0.4	V
Output current sink	I_{SINK}				30	mA
output rise time	T_R	$C_L=20pF$			1.0	us
output fall time	T_F	$C_L=20pF$			1.5	us
Magnetic characteristics						
operate point	B_{op}	$C_L=20pF$	70	120	170	Gs
release point	B_{rp}		30	80	130	Gs
return differential	B_{HYS}			40		Gs

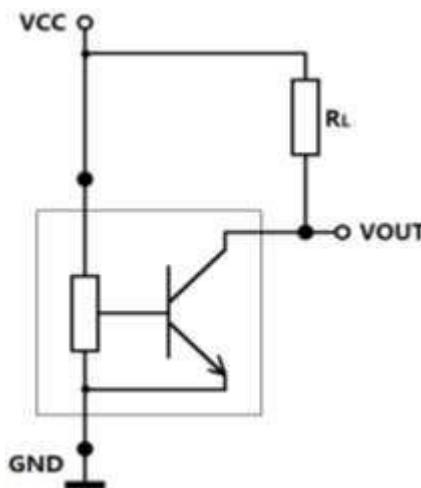

10. Temperature characteristics

Curve of chip operating current versus temperature at $V_{CC}=5V$.

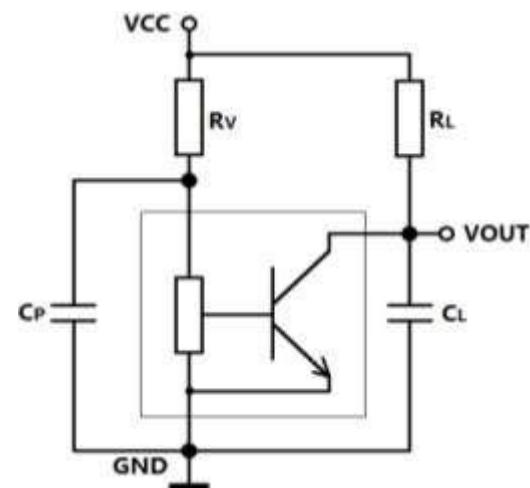

11. Application circuit

Typical application circuits are shown in the diagram below: Application circuit 1, where $R_L = 4.7k\Omega$, is suitable for most circuits. Application circuit 2, where $R_V = 100\Omega$, $C_P = 4.7nF$, $R_L = 4.7k\Omega$, $C_L = 1nF$, is used in circuits susceptible to interference or radiated disturbances on power lines. It is recommended to place resistor R_V and capacitors C_P , C_L in series in the circuit, with these components positioned as close to the chip as possible.
